

**Title:** Group Manager – Engineering Services  
**Location:** Brisbane, Australia  
**Function:** Engineering  
**Details:** Full-Time, Permanent

---

EDL owns and operates a global portfolio of power stations in Australia, North America and Europe. Our vision is to be the leading global producer of sustainable distributed energy. At EDL, we are playing a key role in the world's transition from traditional energy sources to decarbonised solutions. With the combination of organic growth projects and key acquisition targets, EDL is a dynamic organisation capitalising on its extensive portfolio of growth opportunities. Due to continued growth initiatives and global acquisitions, EDL is seeking to appoint a Group Manager - Engineering Services as a key member of the Technical Services Team. Reporting to the COO, this position is ultimately responsible for the strategy and planning within the delivery of Engineering Services and systems across the Group. This position is based in the Brisbane Office.

**Key deliverables include:**

- Planning and leading the engineering strategy across the group and being accountable for the delivery of engineering services, maintaining continuous operation safely in line with budget requirements
- Managing company standards related to equipment selection, design and procurement, and documentation of projects for delivery, for financing requirements and hand-over of projects
- Planning the implementation of suitable quality management systems in line with group timelines and objectives
- Collaboration with Business Development, Projects, Innovation, Operations and H&S groups for developing the FEED package for key projects
- Planning & delivering the effective implementation of associated technical systems and documentation for EDL's fleet of power stations
- Lead champion of H&S policies & procedures for Engineering Services
- Leading a highly competent and diverse engineering and technical team to undertake critical tasks and supply an overflow service for periods of high workload
- Delivering an effective global consulting style service internally for all major technical issues including the investigation of failures and developing Root Cause Analysis reports
- Ensuring associated technical standards, regulatory and permitting requirements related to key projects are best practice
- Preparation of monthly reporting on key activities is board worthy.

**To be considered for this pivotal position, you will:**

- Be a commercially focussed, technically astute qualified engineer with superior leadership skills with proven capability to lead engineering teams remotely with at least 10-15 years hands-on leadership experience within the energy, oil & gas or like sector
- Have a well-honed communication style both verbal and written across technical and non-technical stakeholders
- Have extensive experience in project engineering related to project construction with a change management and strong systems bent for increased efficiency
- Be a degree qualified engineer ideally an electrical, mechanical or chemical with RPEQ, a master's or MBA

- Have demonstrated experience negotiating, client engagement, contracts management and dispute resolution
- Be an H&S champion with quality and management systems experience.

EDL is an employer of choice who has an exceptional safety record and takes pride in their values and their contemporary diversity policy.
