

Title: Technical Services Manager
Location: Michigan, United States
Function: North American Technical Services
Details: Full-Time, Permanent

EDL owns and operates a global portfolio of power stations in Australia, North America and Europe. Our vision is to be the leading global producer of sustainable distributed energy. At EDL, we are playing a key role in the world's transition from traditional energy sources to decarbonised solutions.

Reporting to the Head of Project Delivery and Technical Services – North America, the Technical Services Manager is responsible for delivering solutions that will improve the maintenance practices, reliability and performance of the company's operating plant and equipment.

Key Responsibilities

- Actively promote and ensure all health and safety initiatives by implementing workplace health and safety obligations.
- Responsible for the management of the North America Maintenance Facility including completion of approved capital major maintenance plans.
- Manage a team of technical specialists that provide support for operational technical issues.
- Assist with the enhancement of current maintenance and operation practices.
- Identify opportunities for improvement in reliability of plant and extension of service/maintenance intervals through trials and process efficiencies.
- Assist with the development and maintenance of systems to assemble asset reliability, criticality, and condition information necessary for asset maintenance planning and asset delivery functions.
- Routinely produce reports for use by management.
- Set up and review preventative maintenance tasks for all the company's operating sites using the company's Maintenance Management Systems.
- Produce root cause analysis and failure analysis reports then assist with the implementation of preventative action recommendations.
- Provide cost effective solutions that minimise risk and maximise safety to operators and plant.
- Act as a technical consultant to all departments within the organization in the area of reliability and maintenance.
- Management of 3rd parties undertaking technical upgrades / warranty works.
- Participate in the evaluation of new trials and management of change initiatives.
- Strategically guide the maintenance shop towards the new RNG plants to provide maintenance as a value-added resource.

Qualifications and Experience

- Trade qualified with formal qualifications in engineering desirable
- An understanding of reciprocating engines is required
- Background with MMS systems and predictive maintenance
- Experience with process engineering or gas systems is highly desirable
- A strategic manager who can lead with vision is critical.

EDL is committed to creating a diverse and inclusive environment and is proud to be an equal opportunity employer.
